I found it in various classes of DBpedia and I want to know if it has something particular meaning or it is a book tag for some other reason. Ex: About DBpedia D-tag>AboutDBpedia A: From Wikipedia: Unlike many tagging systems, the D-tag is both ancillary (i.e. not used to retrieve entities) and potentially has some structural meaning. This is because it is computed from the properties of the respective entity type in question. It's a tag used for when you do querying on the dbpedia base, so you could say D-tag would be the equivalent of the SPARQL verb SELECT but without the use of a triple pattern, which is why you get better results if you use a query like: SELECT DISTINCT?entityTitle?label WHERE { ?entity wdt:P515 wd:Q29215. ?entity wdt:P519 ?label. } i.e. that has a statement with a predicate which has a subject, a category and a list of properties to retrieve from the subject. If you ran the query without the D-tag, that would be like looking for people named sarah with a label and then having a statement, and so you'd get more matches like david sarah. You can also use the D-tag in SPARQL DESCRIBE statements. A D-tag

would most likely relate to a class rather than a type, and so more likely to relate to a kind or category. Cyril Truman
Cyril Truman (2 September 1923 – 5 November 2008) was an English football goalkeeper. During his playing career, Truman was mainly associated with Cambridge United, making 30 appearances in the Third Division South between the 1945–46 and 1949–50 seasons. He then transferred to
Luton
